Introduction

This manual contains a listing of the available parts for the Copiscan II Duplex and Simplex scanners. This listing includes individual parts, assemblies, kits, and service tools. The even numbered pages contain the illustration figures and the odd numbered pages contain the parts lists.

The parts listing contains several columns.

<u>Callout</u>	<u>Description</u>	<u>Part No.</u>	<u>Functional Description</u>	<u>Comments</u>

- The **Callout** refers to the callout number for this part, assembly, or kit as indicated in the illustration figure.
- The **Description** refers to the name given the part on the part as it is inventoried.
- The **Part Number** is the number by which the part is ordered.
- The **Functional Description** refers the use of the part (if different from the Part Description).
- The **Comment** field is used to indicate compatibility to firmware version, relationship to a part or assembly, etc.

Assemblies and kits

Assemblies, such as cameras, are factory prealigned and calibrated. Individual parts for these assemblies normally are not available. Replace only with another assembly.

Kits contain a group of parts but are not factory aligned and calibrated. One kit contains lamps and cleaning pads for a simplex scanner. Duplex scanners require two kits. Another kit contains the most used parts in the latest auto feeder skimmer assembly.
